WHAT TO EXPECT AFTER SURGERY WITH THE LIGHT ADJUSTABLE LENS

UV PROTECTIVE GLASSES:

You will receive 3 pairs of glasses the day of your surgery: sunglasses, clear glasses, and bifocal glasses.

- A pair of the glasses provided must be worn outdoors.
- You may remove the glasses to shower, wash your face, apply makeup and/or when sleeping.
- You may need to purchase a pair of reading glasses if you feel the bifocal glasses provided do not work for you. After the first adjustment please try to avoid using any bifocal/reading glasses in order to assess your near vision prior to each subsequent treatment.

ADJUSTMENTS:

- The first adjustment will be approximately 3-4 weeks after the second surgery is performed.
- The following adjustments will then be 3-7 days apart until the final lock-in treatment.
- You will require a minimum of 1 adjustment and a maximum of 3 adjustments. The final 2 treatments for each eye are considered lock-in treatments and are performed after you are happy with your results or after the 3rd treatment, whichever comes first.
- You are required to wear the UV protective glasses for 24 hours after your final lock-in treatment.
